

Award-winning  
Document Management

Faster, new tools, new  
remote hosting options

# Worldox® GX3

Whenever ... wherever ... however you want to work.

**GX3 starts at a very good place**, with the familiar features and award-winning document-management power of Worldox GX2.

**Then GX3 goes further**, much further. Worldox GX3 delivers dramatic gains in speed, optimized backend and database performance. Plus an improved, enhanced user interface, for improved ease-of-use, even quicker self training.

Behind the scenes is the best part – a new, innovative remote communication architecture that delivers Worldox to desktops from either our hosted data centers (SaaS) or from inside your data center, allowing for a thin delivery model for remote users and locations.

**No more remote connectivity barriers. No usability compromises.** Worldox GX3 always looks and feels the same, no matter how (or where) it's used.

## “So what does it actually do for me?”

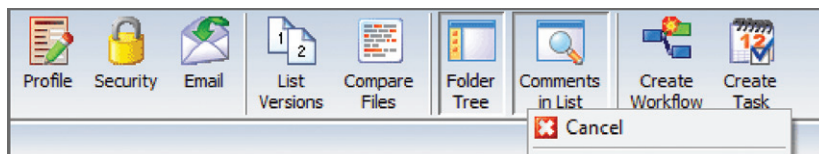

**Look at every new GX3 feature or enhancement; you're seeing quantifiable added value:**

- **To IT Managers**, it's the ability to centralize document management across different offices, even between countries – at speeds similar to local area network installations, with no compromise in usability and consistency.
- **To CEOs and CFOs**, it's a sensible alternative to limited-function, web-based document management systems. GX3 offers three different deployment options, three different price structures.
- **To the Professionals who create and manage documents**, the advantage comes down to speed and ease of use. Seconds saved every time you search, view or open files ... words plus images on toolbar buttons, for instant recognition ... a lower learning curve to start and faster response every day on the job.

Worldox is known for its flexibility, the many ways provided to personalize layouts, colors and fonts.

**GX3 goes even further**, adding the ability to customize toolbars, plus new ways to organize left-side folder tree contents, including matter-centric views. In short, you get improved access to important files, requiring fewer searches, offering far better control over your workspace.

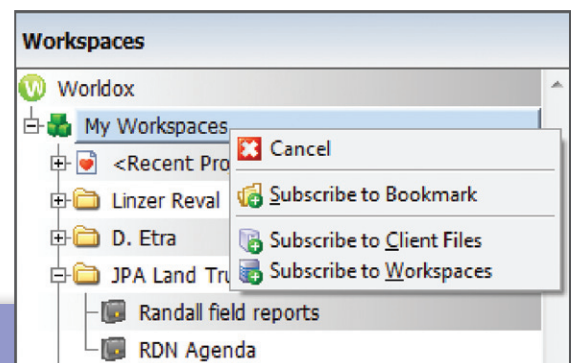

### New toolbar look, completely customizable!

**Toolbar buttons are named**, for quicker recognition and easier learning. And, **the entire toolbar is under your control now**. Remove buttons, rearrange buttons ... even change button images. You will be amazed at how this single GX3 feature simplifies daily document management tasks.

### New My Workspaces options

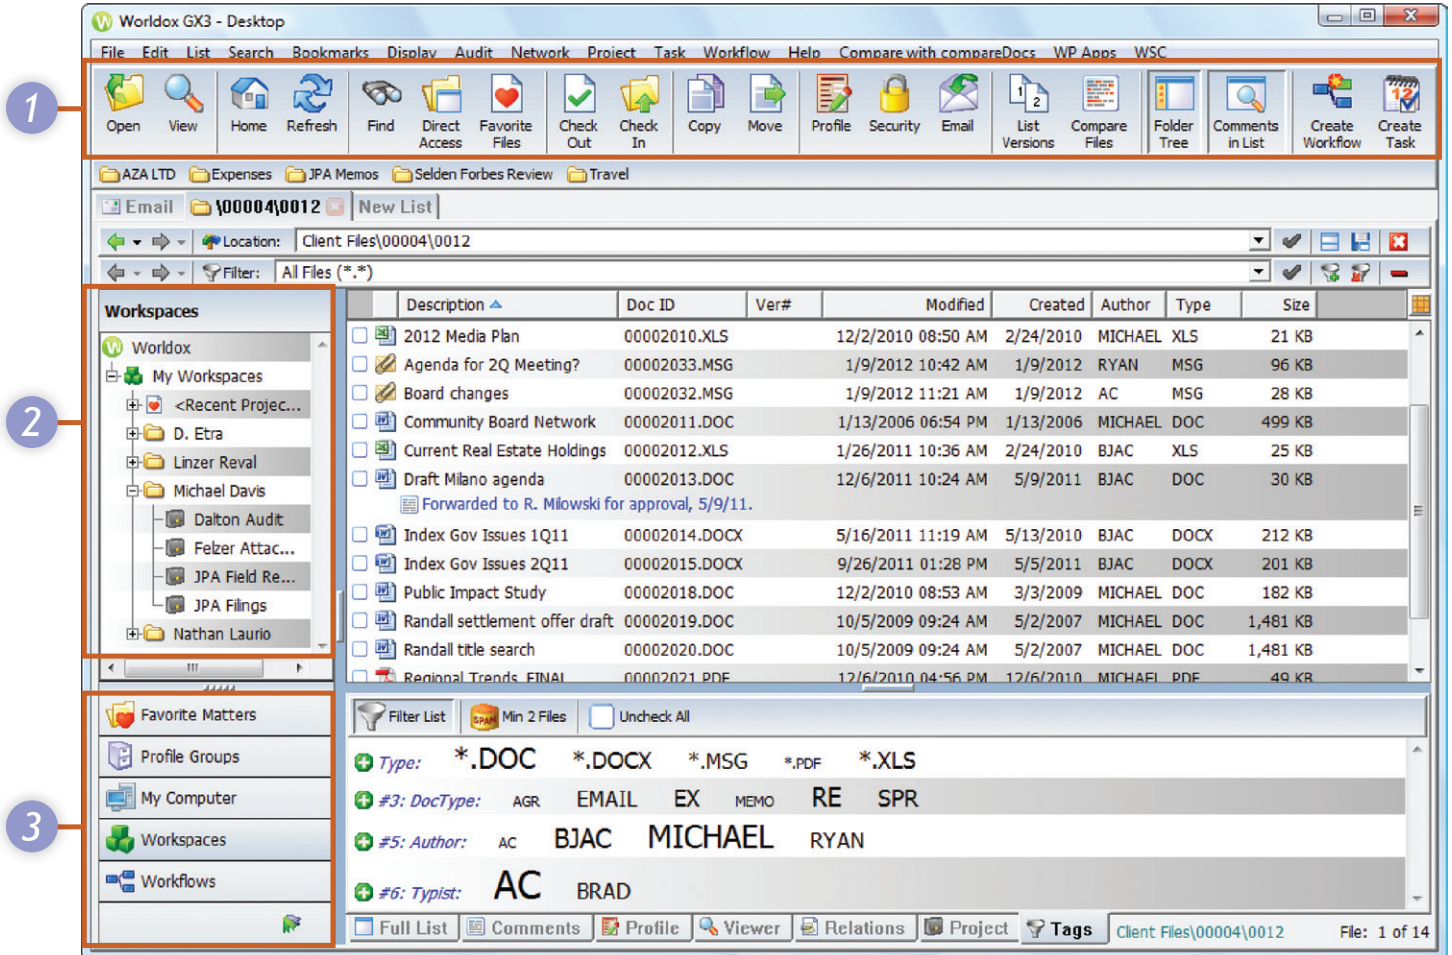

The GX2 My Workspaces zone introduced a personalized content zone in the left-side folder tree. **In GX3, the power of My Workspaces grows**, with new options for sharing files between colleagues and workgroups. Plus, you are never more than one click away from creating a new project, or accessing existing ones.

### Enhanced speed, integration

- **Speed.** A redesigned and optimized architecture delivers data to your screen faster – 30% to 60% faster in many common operations.
- **More 3rd party integrations**, connectors and system tools. (Airmail, Bulk Archive, Client/Matter connectors)
- Tighter MS Active Directory integration.
- Ability to view Portfolio PDF's.
- New ISYS engine, for streamlined indexing, database management.
- Better MS server integration, for easier maintenance and setup.

So easy to use  
... new ways to  
customize and  
personalize your  
workspace.

1 New toolbar: The same buttons as in GX2, only now they're labeled for quick recognition. Even better, just right-click to rearrange buttons, add or delete buttons, even change icon graphics. How this toolbar appears is completely up to you.

2 Expanded My Workspaces: My Workspaces is now even more flexible, offering the ability to visually bookmark personal folders – yours and others.

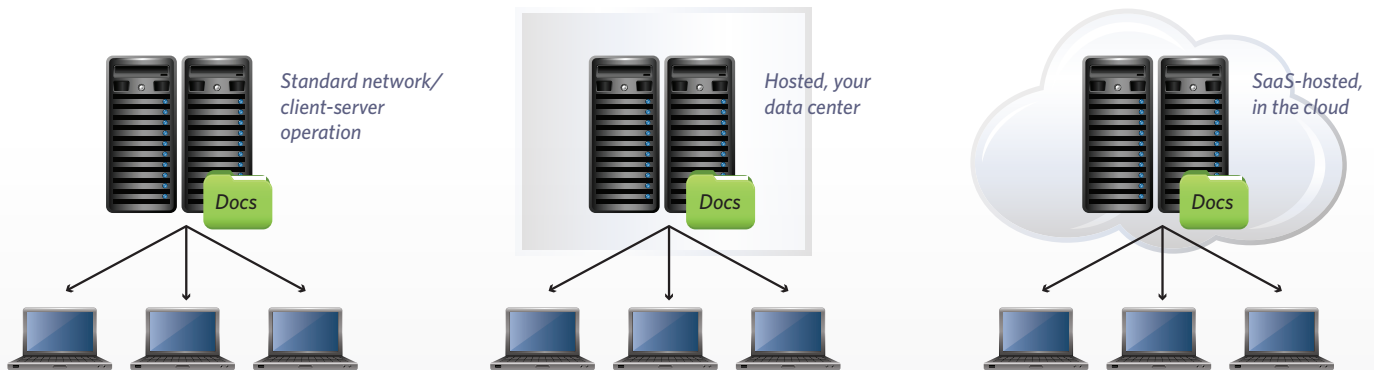

3 New view buttons: A re-organized left-side pane presents new view choices, gives users ways to move between content categories and make better use of this visual space.

A new matter-centric view: Favorite Matters offers a way to view selected case files in that left-side folder tree pane.

## What has not changed in GX3

- All popular features in Worldox GX2 are still here ... from archive/retention, My Workspaces and projects to powerful search tools and visual Tags filters.
- Extend your document access with new Worldox Web Mobile 2.0 and the updated, free iPad app.
- Optional Productivity Suite additions – WorkFlow, Task, Notify, Chat, compareDocs, pdfDocs support built-in.

# One Worldox GX3 ... 3 very different ways to deploy it.

## GX3 Professional

**Desktop version:** the familiar client/server approach, with Worldox GX3 installed on the users' local computers. All Worldox managed documents are located on one or more networked servers. This is the traditional Worldox deployment method and an upgrade for our GX2 customers.

## GX3 Enterprise\*

**Enterprise version:** takes advantage of Microsoft's Published App technology and extends it to a new level. The Worldox Enterprise Server architecture allows the Worldox published application to have full communication with their local applications, including MS Office, Outlook and third party integrations such as case management software.

## GX3 Cloud\*

**SaaS-hosted, Cloud-based:** in this model, GX3 – and only GX3 – plus all documents are hosted and managed in our data center. Users have the same rich Worldox experience, regardless of where they are located, for a modest monthly fee.

\* GX3 Professional available February 2012, followed by GX3 Enterprise and GX3 Cloud

**Transparent, platform-independent operation.** This probably means little to users. No reason they should care, as **Worldox GX3 always looks and acts the same** – no matter where it comes from, or how it gets to their desktops.

Delivery mode does matter to CFOs and IT Directors. If you want a true SaaS deployment hosted in our cloud, here it is. But just for Worldox, and Worldox-managed documents.

You can have that same architecture on site in your data center (**Enterprise** version). Or, use the **Professional** version for a traditional client-server, network-based set-up.

**No usability compromises for web-based tools.** Worldox GX3 always looks and feels the same. At work, at home, even on the other side of the world. It's **something truly new** – a freedom and consistency not seen before in document management.
