

Using Worldox® with KwikTag

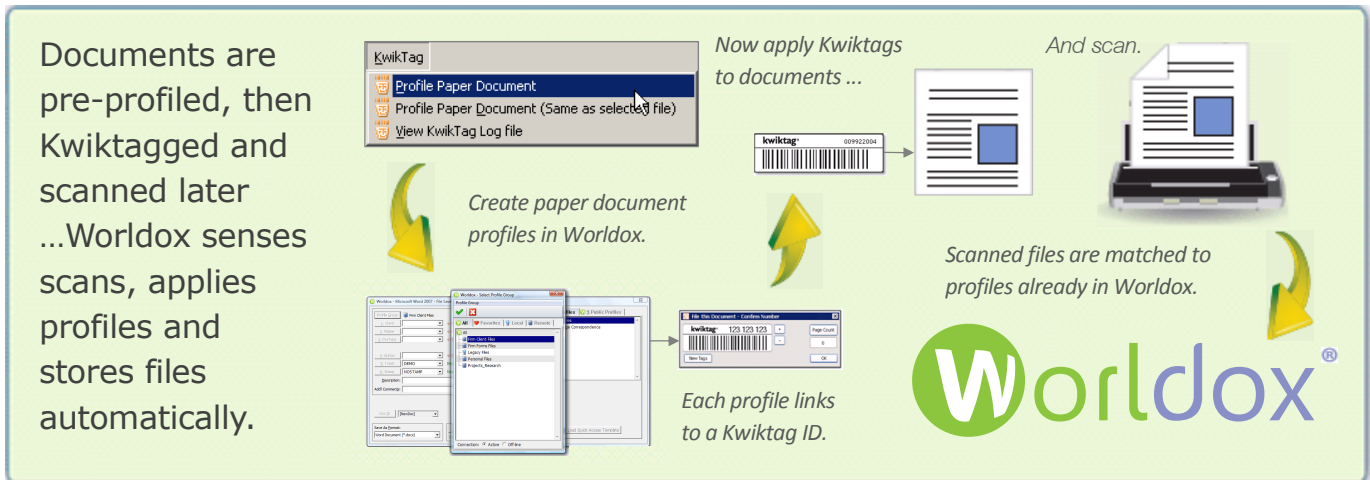

KwikTag now works with Worldox.

If you are using Worldox GX or GX2, KwikTag makes capture so much easier. It's a simple way to automate the profiling and scanning of paper documents into Worldox.

KwikTags are small, pre-numbered labels. Just profile your document in Worldox. KwikTag automatically links your next label to the profile. Put the label on the document, set it aside, and scan it whenever you like. When documents are scanned, Worldox "recognizes" the tags and stores documents with the profiles.

KwikTag labels come in pop-up dispensers. Simply pull off the tag and apply it to the document before scanning.

Scanning tagged paper docs into Worldox

1. Create paper document profiles in Worldox, via a simple menu choice in Worldox.
2. Apply the tags to the documents to be scanned.
3. Set the documents aside. Scan those documents whenever you want.
4. Scans are delivered to Worldox to incoming files, and matched automatically to the correct profiles.

Benefits of using Worldox with KwikTag

- Easiest capture method. Requires little effort. KwikTag allows users to stay at their desks ... saves trips to the MFD.
- Integrated into Worldox screens. Activated by pull-down and right-click menus in Worldox, so training is minimal.
- Offers PDF, PDF + text, OCR, Word conversion options.
- Separates profiling and scanning. Scanning can be safely delegated to clerical staff.
