

**Purpose:**

To provide PDF conversion facilities for documents and delivery to the Sony DPT S1 synch folder.

**Prerequisites:**

Installed and working Sony FileCloud synchronisation application  
Installed and working BullZip PDF printer driver (freeware in many circumstances).

**Installation:**

Download the install-pdf2sony.zip from <http://www.wd-bespoke.com/dist/sony>  
Extract the install-pdf2sony.exe installer  
Run the installation program and accept all default settings

**Result:**

The program will be installed to your %APPDATA%\PDF2SONY folder so as to avoid security issues.  
A desktop icon will be installed to your desktop like this:

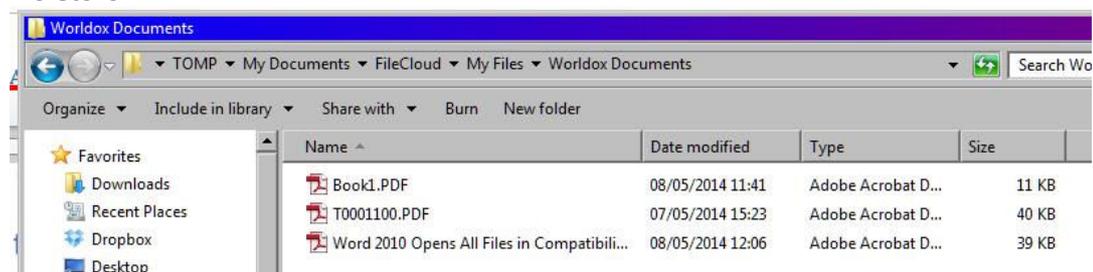

**Usage:**

When you drag and drop a file that needs to be converted to PDF onto this icon it will launch the application associated with the file to print it through the BullZip PDF print driver and then deliver the PDF file to the FileCloud Synchronisation folder.

So, for example, this file:

Was dropped on to the desktop Icon and, after conversion, was delivered to the Worldox Documents folder for the FileCloud application to synchronise with the cloud file store

**Notes:**

The applet will only be able to work with file types that have an association with the specific type of file and can print that file unattended. Office file formats like Documents and Spreadsheets are well catered for in this respect but image formats and some more obscure formats may fail with a warning message being displayed to the user.
