

iRedline

Enhanced Word Comparison Application

iRedline 7 takes a fresh approach to MS Word's native comparison engine by adding the tools and flexibility law firms require but find unavailable in Word's Compare Document.

iREDLINE PROMOTES BEST PRACTICES FOR MS OFFICE:

iRedline is fully-integrated with Microsoft Word. As an add-on application to MS Word, iRedline result documents are in Word format so they can be easily shared, navigated or re-purposed.

Many firms would like to use Word's Track Changes and comparison tools, but don't because of the limitations and lack of features such as DMS integration. **iRedline starts where Word leaves off**, allowing firms to leverage the knowledge users already have with Word.

PRACTICAL DOCUMENT COMPARISON TOOLS:

Users already familiar with using tracked changes find iRedline is the natural next step. It enhances Word's Track Changes by providing users with the ability to; output comparisons in Track Change format, toggle between insertion/deletion views, convert DeltaView changes to Track Changes, create change reports, print only iRedline pages and more.

An iRedline 7 comparison can result in a new document, attachment, related document, prepared as an e-mail attachment, embedded as an attachment, or saved to the document management system.

SIMPLIFIED ADMINISTRATION:

iRedline is easy to install, maintain and deploy. Firm specifications are administered in a configuration XML file. Through the iRedline administration, user options can be controlled and firm standards can be deployed.

New features of iRedline 7 include:

- DMS integration – right click and compare
- Results produced as tracked changes
- Ability to convert DeltaView changes to Word's tracked changes
- Ability to accept and reject DeltaView changes
- Ability to add a report to result document
- Tri-View layout
- A workflow oriented ribbon

INTEGRATION WITH MISSION-CRITICAL SOFTWARE APPLICATIONS:

iRedline enables a user to compare documents stored on local or network drives, or that are accessed from document management systems including Interwoven, OpenText, NetDocuments and WORLDOX products.

WHAT OUR CLIENTS ARE SAYING:

"We chose iRedline as our document redlining/comparison tool in 2003 when we upgraded from Word 97 to Word 2003. We were looking for a solution that not only would be easy to use while providing accurate comparisons, but also a tool that would maintain the document's original formatting and allow the ability to accept or reject changes. We found iRedline was the tool that best fit our needs, and that most resembled Word's native tools."
